The motivation and use cases

- What problem does it solve?

Full time employees who are busy at work also want to enjoy family style food instead of eating at restaurant. And a lot of home kitchens has more productivity than just satisfying their families, which can be used to provide to more people with delicate and clean food . With our app, users and home kitchen seller can have a win win situation.

- Why do you want to do this?

Share economy become a popular idea in our daily life. Uber solved shared transportation and airbnb solved shared accommodation, which inspired us to come up a new idea to solve the shared food.

- How user will benefit from it?

With our spp, buyer can search and get home style food quickly and seller can shared their surplus productivity and make extra money.
